

PROFESSIONAL USAGE:

For Regular Color and Temperature Change Color Gel Polishes.

STEP 1. With normal manicure process, clean nails and then trim nail surface.

STEP 2. For long lasting result, apply HMD Base Coat first.

STEP 3. Cure with UV LED lamp for 10-120 seconds, depends on the nail dryer.

STEP 4. Apply 1st thin layer of HMD color gel coat directly.

STEP 5. Cure with UV LED lamp for 10-120 seconds, depends on the nail dryer.

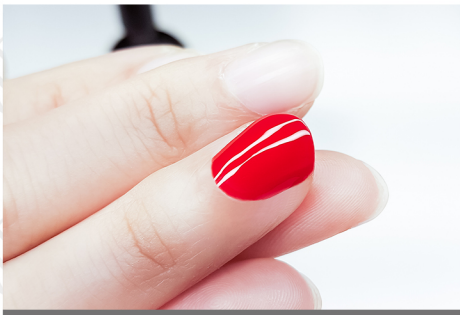

STEP 6. Apply 2nd thin layer of HMD color gel coat.

STEP 7. Cure with UV LED lamp for 10-120 seconds, depends on the nail dryer.

STEP 8. Apply HMD no wipe Premium Top Coat for all nails, cure under UV LED lamp for 5-60 seconds, depends on the nail dryer.

Enjoy your 20 Days high shine Manicure!

NOTICE:

1. Curing time will vary, depends on body and room temperature. Please allow additional 10-20 seconds if it's necessary.
2. Numbers of layers applied would affect depth of color OR uneven color. Please follow the above instruction carefully.
3. To prevent the gel polish from lifting, it's recommended to cap the free edge/tip on every coat. It's especially important for the base and top coat.
4. Please use HMD Base Coat and Top Coat for best results. Base Coat would provide perfect foundation for your manicure which would affect durability. Top Coat would deliver that same mirror-like shine, minus the upkeep and brittle nails.
